

Classic Pilaster

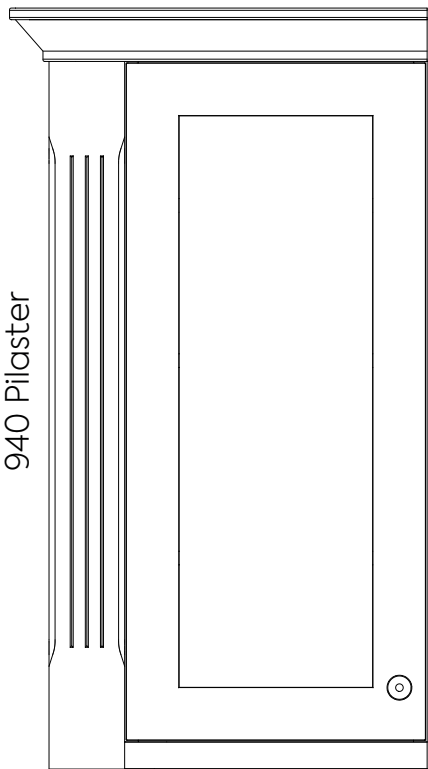

We Make the Difference.

Base Cabinet

Standard Height Wall Cabinet

Tall Wall Cabinet

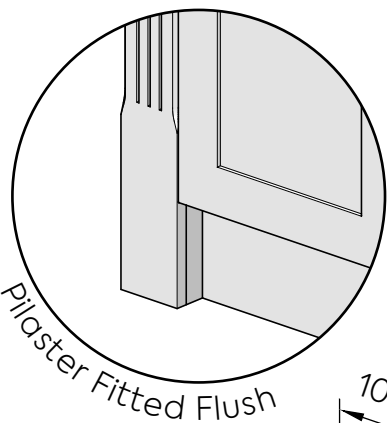

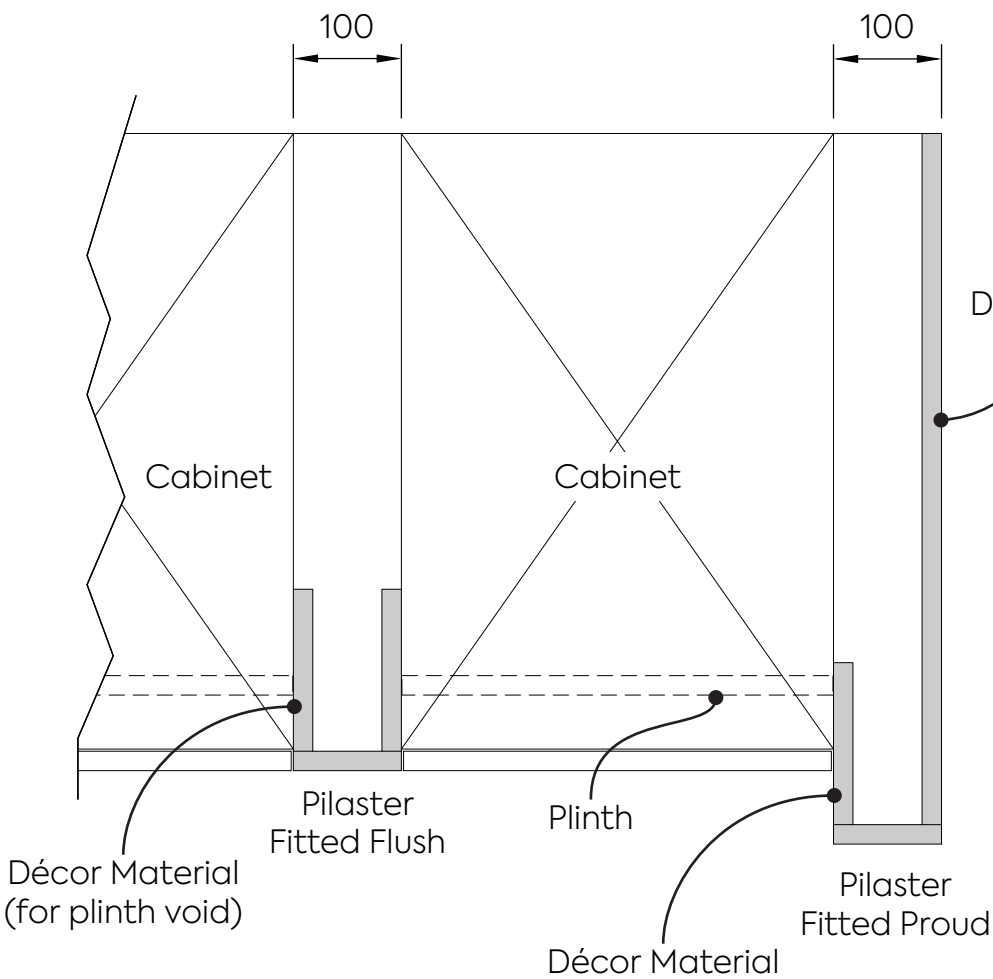

Pilasters are supplied in two sizes – the **885 mm** is for use on Base Cabinets & Standard Height Wall Cabinets, the **940 mm** for Tall Wall Cabinets. Note that only the Pilaster itself is supplied due to it's variety of uses – additional 18mm plinth material or 18mm décor material should be ordered as required, see examples below.

For Base Cabinets – there is a 15mm scribing allowance at the bottom – this can be trimmed on-site to suit leg/plinth height, cut edges should be re-edged or sealed against moisture ingress.

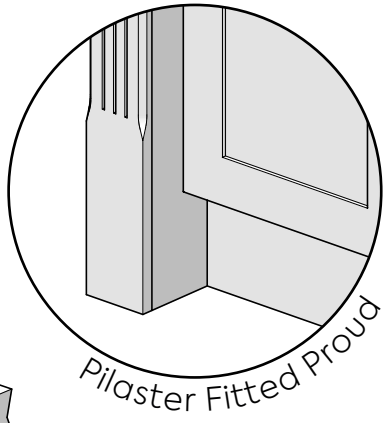

For 720 Standard Wall Cabinets – we recommend cutting to 760mm high to match décor panel height – this will give a 40mm overlap at the bottom to accommodate 36mm high multi-purpose rail. Cut edges should be re-edged or sealed against moisture ingress.

For 900 Tall Wall Cabinets – the Pilaster can be used as supplied at 940mm, giving a 40mm overlap at the bottom to accommodate 36mm multi-purpose rail.

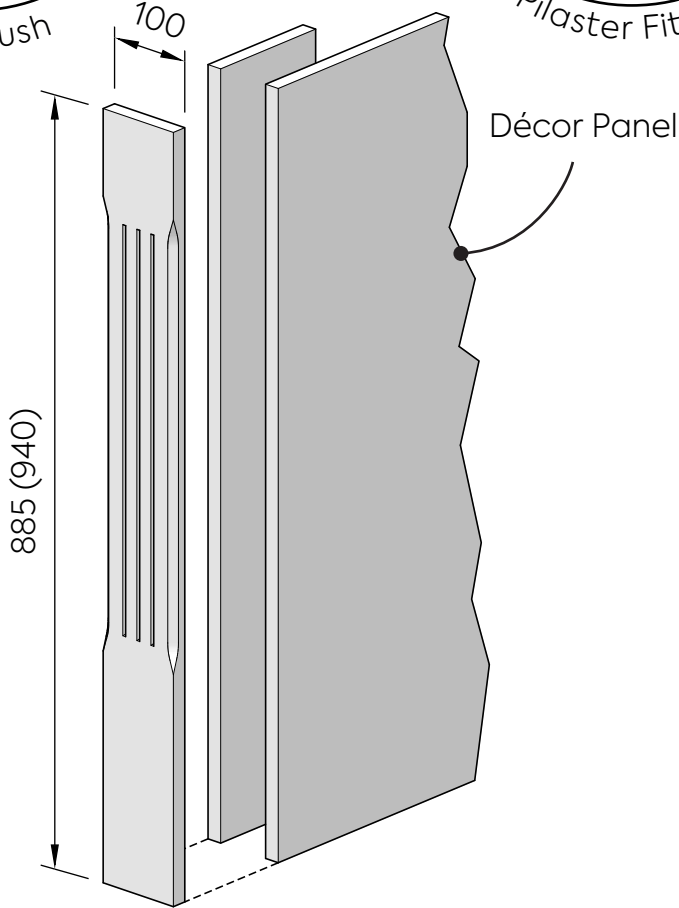

Plan View of Installation

Pilaster Fitted Flush

Pilaster Fitted Proud

Please note: Décor material will be required to fill the void between the Pilaster and cabinet and/or plinth. Extra lengths of plinth can be used here, or décor material.

Please ensure 18mm décor material or 18mm plinth is ordered as required for the installation. Fitting can be via simple brackets, battens, biscuits, or pocket hole screws.
